L211 Logic and Mathematics

## 5. Lecture

## Last lecture

Norbert PREINING
Induction
http://www.preining.info/jaist/1211/2015e/

Important points

- write down that you use induction
- state the predicate/property you are going to prove

## Homework

- prove $P(0)$
- prove $P(n) \rightarrow P(n+1)$
- qed $\square$
- the assumption needs to be used
- induction is not persuasion

TILING A $2^{n} \times 2^{n}$ SIZED GARDEN

## Example

Stone Garden

Conclusion

## Example

8-Puzzle
Sometimes it is better to use a stronger induction hypothesis!

| $A$ | $B$ | $B$ |
| :--- | :--- | :--- |
| $A$ | $B$ | $E$ |
| $G$ | $A$ | $F$ |

Finished!

| $A$ | $B$ | $C$ |
| :---: | :---: | :---: |
| $D$ | $E$ | $F$ |
| $H$ | $G$ |  |

Column move

| $A$ | $E$ | $B$ |
| :---: | :---: | :---: |
| $D$ | $E$ | $C$ |
| $G$ | $H$ | $F$ |

Where is the difference? the order changes!

Row move

| $A^{1}$ | $E^{2}$ | $B^{3}$ |
| :--- | :--- | :--- |
|  | $D^{4}$ | $C^{5}$ |
|  | $G^{6}$ | $H^{7}$ |
|  | $F^{8}$ |  |

Column move

| $A^{1}$ | $E^{2}$ | $B^{3}$ |
| :--- | :--- | :--- |
| $D^{4}$ |  | $C^{5}$ |
| $G^{6}$ | $H^{7}$ | $F^{8}$ |

Row move

| $A^{1}$ | $E^{2}$ | $B^{3}$ |
| :---: | :---: | :---: |
| $D^{4}$ |  | $C^{5}$ |
| $G^{6}$ | $H^{7}$ | $F^{8}$ |

Lemma: During a row move, the order of all pairs remain the same.

Column move

| $A^{1}$ |  | $B^{2}$ |
| :--- | :--- | :--- |
| $D^{3}$ | $E^{4}$ | $C^{5}$ |
| $G^{6}$ | $H^{7}$ | $F^{8}$ |

Lemma: During a column move, the ordering of two pairs changes.

Inverted pairs: How many inversions

## ARE THERE?

| $A^{1}$ | $B^{2}$ | $C^{3}$ |
| :--- | :--- | :--- | :--- |
| $D^{4}$ | $E^{5}$ | $F^{6}$ |
| $G^{8}$ | $H^{8}$ | $F^{8}$ |
|  |  |  |

## Applying the theorem

Number of order inversions: 1 Number of order inversions: 0

Thus, the left puzzle cannot be solved.

## Theorem

The parity of the number of order inversions does not change with any move.
(If it is even at the beginning, it remains even.)
Proof:

- During a row move, the number of inversions does not change.
- During a column move, the number of inversions changes by $+2, \pm 0$, or -2 .

## Conclusion

In case of recurrence/iterations, one needs to find a non-changing property and prove that it doesn't changes (parity in this case).

## INDUCTION PRINCIPLE

For a property $P(n)$ of natural numbers, if

## $P(0)$ holds <br> and

for all natural numbers $n, P(n) \rightarrow P(n+1)$ holds
then
$P(n)$ holds for all natural numbers, that is $\forall n P(n)$ holds.

## ANOTHER METHOD - STRONG INDUCTION

## $P(0)$ holds <br> and

if for all $k$ less than $n, P(k)$ holds, then also $P(n)$ holds
then
$P(n)$ holds for all natural numbers, that is $\forall n P(n)$ holds.

## Example

 Breaking down towers
